

## CONVERSION DRIVE CASTER

MOTOR POWERED CASTER

FULLY INTEGRATED SOLUTION  
For  
Material Handling Carts

### CONVERT EXISTING CARTS INTO POWERED CARTS

#### Complete Solution

Fully Integrated Unit

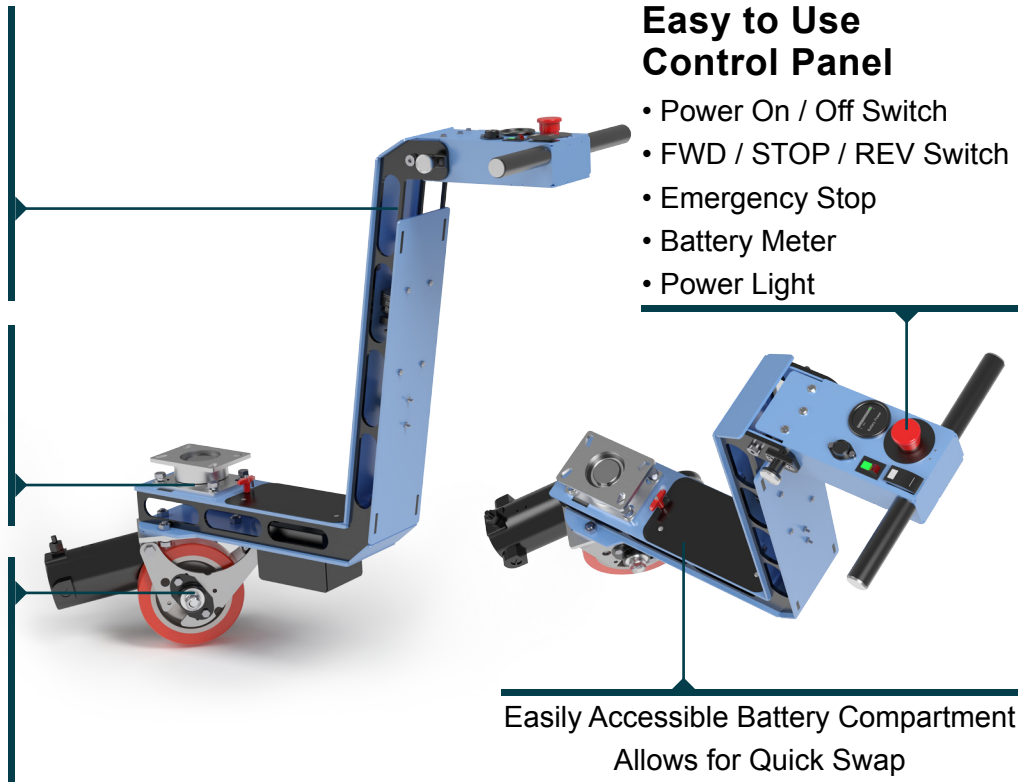

- Drive Caster®
- Steering Handle
- Motor Controller
- Battery
- User Controls

#### Easily Integrated

- Can replace existing swivel caster
- Various Top Plates available
- Attaches with 4 bolts

#### Power to Move 5,000lbs

- Add a stand alone drive caster for greater capacity
- Add a 2nd Conversion Drive Caster for advanced maneuvering

#### Easy to Use Control Panel

- Power On / Off Switch
- FWD / STOP / REV Switch
- Emergency Stop
- Battery Meter
- Power Light

Easily Accessible Battery Compartment  
Allows for Quick Swap

#### INCREASE PRODUCTIVITY & REDUCE COSTS

The Conversion Drive Caster converts your existing material handling carts into Motor Powered Carts, quickly and easily. Simply remove one swivel caster and bolt in the Conversion Drive Caster and away you go.

- Eliminates the risk of overexertion injuries
- 1 person can move loads that may have required several
- Easy to operate and maneuver

#### PRODUCT SPECIFICATIONS

<b>Drive / Load Capacity</b>	5,000 Lbs / 2,000 Lbs
<b>Drive Motor</b>	1/2 HP
<b>Max Speed</b>	2 MPH
<b>Battery</b>	12 Volt / 24 Volt 60 AH Total
<b>Wheel Size</b>	8"D x 2"W
<b>Wheel Type</b>	Polyurethane on Cast Iron
<b>Construction</b>	Steel
<b>Finish</b>	Powder Coating

## FAQ's

### MOTOR POWERED CASTERS

#### Why would I want a Conversion Drive Caster?

The Conversion Drive Caster eliminates the risk of overexertion injuries, especially on heavier loads. Often, heavier loads require multiple people to push / pull the carts, increasing costs and risk of injuries. This unit only requires one person to operate, and zero push / pull.

#### Will I need anything else with the Conversion Drive Caster?

No, the Conversion Drive Caster is a complete unit, that includes everything needed to add motor power to material handling carts.

#### What if I need to move more than 5,000 lbs?

We can double the capacity by adding a STANDARD Drive Caster®, in place of a rigid caster. To find out more about the Drive Caster®, go to [www.casterconcepts.com/drive-caster](http://www.casterconcepts.com/drive-caster) or contact us at 517-629-8838

#### What safety features are incorporated?

There are several safety features integrated into this unit, including:

- A top speed of 2 mph.
- A large, bright emergency stop switch
- On / Off Power Switch

#### What if we want to use the unit for multiple shifts?

The battery in the Conversion Drive Caster is easily accessible and swappable, simply keep extra batteries charged and swap them out as needed. The battery meter on the control panel displays the battery charge status.

#### What is the difference between drive capacity and load carrying capacity?

Drive capacity is how much weight the Drive Caster® can move, whereas load carrying capacity is how much weight can the caster support. Keep in mind that the load carrying capacity of a caster, is divided between the number of casters on the cart.

The drive capacity is 5,000 lbs and the load carrying capacity is 2,000 lbs.
